linkedin.com/in/m-anforowicz/

manfor@cs.washington.edu

- Industry experience in: C, C++, Python, JavaScript, Linux, Docker, FreeRTOS, ESP32, circuit design, GDB.
- Academic experience in: Rust, Java, Typescript, SystemVerilog, SQL, Arduino, serial protocols.
- Native speaker of English and Polish.

EDUCATION

Master of Science in Computer Engineering — University of Washington **2022 - Expected June 2027**
(Combined BS/MS at Paul G. Allen School of Computer Science)

- GPA: 3.90
- Key courses: Machine Learning, Systems Programming, Digital Design, Data Visualization, Security, Operating Systems, Distributed Systems, Networks, Linguistics, Computer Vision, Data Management.

EXPERIENCE

Software Engineering Intern — WiBotic

June 2024 - September 2024

- Wrote over 3000 lines of multithreaded firmware for a real-time [CAN-to-ethernet adapter](#).
- Developed a user-friendly fullstack web app for remotely configuring this adapter.
- Designed and built PCBs to power and test microcontrollers on a shared CAN bus.
- Created an integration test suite that caught bugs in a large embedded C++ codebase.

Course Design Research Assistant — University of Washington

June 2025 - Present

- Helps develop a new computer science course about concurrency with Prof. Tom Anderson.
- Designs auto-graded labs about cache coherence, asynchronous programming, and Rust.

Computer Science Teaching Assistant — University of Washington

January 2025 - June 2025

- Led discussion sections and graded homework for CSE 351 (Hardware/Software Interface).
- Taught hundreds of students the basics of C, Linux, GDB, virtual memory, caching, etc.

PROJECTS

YouTube educator

2022 - Present

- [The "Just One More Paradox"](#) - Over 3M views. [Programmatically animated](#).
- [PCB Magnetorquer Prototype - Husky Satellite Lab](#) - Includes [optimization code I wrote](#).

Student organizations — University of Washington

2022 - Present,

- At UW Husky Flying Club, leads a team in building remotely-operated [aerial vehicles](#).
- Creates marketing websites that auto-deploy using GitHub continuous integration: [UW Competitive Programming Club \(code\)](#), [Husky Satellite Lab \(code\)](#), [personal site \(code\)](#).
- At Husky Satellite Lab built [CubeSat radios](#) and programs high-altitude balloon [payloads](#).
- Competes on a team in ICPC regionals.

Independent projects

2022 - Present

- Creates open source projects such as [Gday](#), a tool for encrypted peer-to-peer file transfer.
- Published an interactive Rust web assembly [simulation](#) on personal website.
- FCC-certified amateur radio operator.
