Marcin Anforowicz

(425) 340-9709

manforowicz.github.io linkedin.com/in/m-anforowicz/ manfor@cs.washington.edu

- Industry experience: C, C++, Rust, Python, Docker, AWS, JavaScript, GDB, FreeRTOS, KiCad, CMake.
- Academic experience: PyTorch, machine learning research, Java, Go, SystemVerilog, SQL.
- Native speaker of English and Polish.

EDUCATION

Master's in Computer Science & Engineering — University of Washington **Graduates in June 2027**

- GPA: 3.90. BS/MS at the Paul G. Allen School of Computer Science & Engineering.
- Key courses: Deep Learning, Reinforcement Learning, Computer Vision, Distributed Systems, Data Center Systems, Operating Systems, Security, Linguistics, Digital Design.
- Undergraduate capstone: Gated ViT structured pruning, with a lottery ticket hypothesis perspective.

EXPERIENCE

Software Engineering Intern — Qumulo **Summer 2026**

- Worked on a distributed filesystem that acts as a sparse read/write cache over an external S3 bucket.
- Wrote fuzz tests that caught transaction race conditions and livelock.
- Upgraded serialized on-disk structures and RPCs, while maintaining backwards compatibility.

Computer Science Teaching Assistant — University of Washington **January 2025 - Present**

- Helped create a new course called CSE 493L (Concurrency, Parallelism, and Rust), serves as head TA.
- Designed auto-graded assignments on async/await, cache coherence, multi-threading, dataflow, etc.
- Helped teach CSE 351 (Hardware/Software Interface). Covers caching, C, virtual memory, etc.

Software Engineering Intern — WiBotic **Summer 2024**

- Programmed a real-time CAN-to-Ethernet network adapter, and a web app for configuring it.
- Designed and built a PCB to power and test microcontrollers on a shared CAN bus.
- Created a hardware integration test suite that caught bugs in a production embedded C++ codebase.

PROJECTS

Student organizations — University of Washington **2022 - Present**

- At Husky Satellite Lab, programmed a high-altitude payload, supervised launch as safety officer, and created a Magnetorquer Prototype PCB.
- At Husky Flying Club, taught a team how to build remotely-operated aerial vehicles.
- Creates easy-to-maintain websites: Competitive Programming, Husky Satellite Lab, personal.
- Competes on a team in ICPC (International Collegiate Programming Contest) regionals.

Independent projects **2022 - Present**

- Gday (encrypted peer-to-peer file transfer), Boids (a simulation compiled to WebAssembly).
- FCC-certified amateur radio operator.
- Educational math YouTube video with over 3 million views: The "Just One More Paradox".
