manfor@cs.washington.edu

- Industry experience in: C, C++, Rust, Python, Docker, JavaScript, GDB, FreeRTOS, ESP32, KiCad.
- Academic experience in: PyTorch, Java, Typescript, SystemVerilog, SQL, Arduino.
- Native speaker of English and Polish.

EDUCATION

Master's in Computer Science & Engineering — University of Washington 2022 - Expected June 2027

- Combined BS/MS at Paul G. Allen School of Computer Science & Engineering.
- GPA: 3.90
- Key courses: Deep Learning, Reinforcement Learning, Data Visualization, Security, Operating Systems, Distributed Systems, Networks, Linguistics, Computer Vision, Data Management.
- Wrote a capstone report, [Gated ViT structured pruning, with a lottery ticket hypothesis perspective](#).

EXPERIENCE

Software Engineering Intern — Qumulo

June 2026 - September 2026

- Adding support for mounting external S3 buckets in the filesystem.
- Writing chaos tests that catch transaction race conditions in distributed clusters.
- Improving maintainability by performing refactors in the large Rust and C codebase.

Computer Science Teaching Assistant — University of Washington

January 2025 - December 2026

- Helped create and teach a new course called [CSE 493L: Concurrency, Parallelism, and Rust](#).
- Designed auto-graded assignments on [async/await](#), cache coherence, multi-threading, dataflow, etc.
- Helped teach [CSE 351](#) (Hardware/Software Interface). Covers caching, C, virtual memory, etc.

Software Engineering Intern — WiBotic

June 2024 - September 2024

- Wrote the firmware for a new real-time [CAN-to-ethernet adapter](#).
- Built an intuitive fullstack web app for remotely configuring this adapter.
- Designed and built a PCB to power and test microcontrollers on a shared CAN bus.
- Created a hardware integration test suite that caught critical bugs in a production C++ codebase.

PROJECTS

Student organizations — University of Washington

2022 - Present,

- At Husky Satellite Lab, programmed a [high-altitude payload](#) and supervised launch as safety officer.
- At Husky Flying Club, lead a team in building remotely-operated [aerial vehicles](#).
- Creates marketing websites that auto-deploy using GitHub continuous integration: [Competitive Programming Club](#) (code), [Husky Satellite Lab](#) (code), [personal site](#) (code).
- Competes on a team in ICPC (International Collegiate Programming Contest) regionals.

Independent projects

2022 - Present

- Creates open source projects such as [Gday](#), a tool for encrypted peer-to-peer file transfer.
- Wrote a [simulation](#) in Rust that compiles and runs in web assembly
- FCC-certified amateur radio operator.

YouTube educator

2022 - Present

- [The "Just One More Paradox"](#) - Over 3 million views. Mathematical intuition for the Kelly Criterion.
- [PCB Magnetorquer Prototype - Husky Satellite Lab](#).
