manfor@cs.washington.edu

- Industry experience in: C, C++, Rust, Python, Docker, JavaScript, GDB, FreeRTOS, ESP32, KiCad.
- Academic experience in: PyTorch, machine learning research, Java, SystemVerilog, SQL, embedded.
- Native speaker of English and Polish.

EDUCATION

Master's in Computer Science & Engineering — University of Washington 2022 - Expected June 2027

- GPA: 3.90
- Combined BS/MS at the Paul G. Allen School of Computer Science & Engineering.
- Key courses: Deep Learning, Reinforcement Learning, Computer Vision, Distributed Systems, Data Visualization, Security, Operating Systems, Networks, Linguistics, Data Management.
- Undergraduate capstone: [Gated ViT structured pruning, with a lottery ticket hypothesis perspective](#).

EXPERIENCE

Software Engineering Intern — Qumulo

June 2026 - September 2026

- Helped add support for mounting external AWS S3 buckets in the filesystem, with read/write caching.
- Wrote fuzz tests that caught transaction race conditions and livelock in distributed clusters.
- Improved maintainability by performing refactors in the large Rust and C codebase.
- Added eventually-consistent aggregate metrics counting external objects for billing.

Computer Science Teaching Assistant — University of Washington

January 2025 - December 2026

- Helped create a new course called [CSE 493L](#) (Concurrency, Parallelism, and Rust).
- Designed auto-graded assignments on [async/await](#), cache coherence, multi-threading, dataflow, etc.
- Helped teach [CSE 351](#) (Hardware/Software Interface). Covers caching, C, virtual memory, etc.

Software Engineering Intern — WiBotic

June 2024 - September 2024

- Programmed a real-time [CAN-to-ethernet network adapter](#), and a web app for configuring it.
- Designed and built a PCB to power and test microcontrollers on a shared CAN bus.
- Created a hardware integration test suite that caught bugs in a production embedded C++ codebase.

PROJECTS

Student organizations — University of Washington

2022 - Present,

- At Husky Satellite Lab, programmed a [high-altitude payload](#), supervised launch as safety officer, and created a [PCB Magnetorquer Prototype](#).
- At Husky Flying Club, lead a team in building remotely-operated [aerial vehicles](#).
- Created marketing websites that auto-deploy using GitHub continuous integration: [Competitive Programming Club](#) (code), [Husky Satellite Lab](#) (code), [personal site](#) (code).
- Competes on a team in ICPC (International Collegiate Programming Contest) regionals.

Independent projects

2022 - Present

- [Gday](#) (encrypted peer-to-peer file transfer), [Boids](#) (a simulation compiled to web assembly).
- FCC-certified amateur radio operator.
- Educational math YouTube video with over 3 million views: [The "Just One More Paradox"](#).
